SUMMARY

Motivated and enthusiastic Computer Science and Engineering (CSE) student at the University of Asia Pacific (UAP) with a strong interest in Software Engineering, Backend Development, Artificial Intelligence, Robotics, and Database Systems. Skilled in Python, Java, SQL, Django, and PostgreSQL through academic and personal projects. Passionate about solving real-world problems, continuously learning new technologies, and contributing to innovative software solutions. Seeking an internship or entry-level Software Engineer position to apply my technical knowledge while gaining industry experience.

TARGET POSITIONS

Software Engineer (Intern) • Backend Developer (Intern) • Python Developer (Intern) • Junior Software Engineer • Web Application Developer

EDUCATION

Bachelor of Science

University of Asia Pacific
Computer Science and Engineering
4th Year Student | Expected Graduation: 2027
• CGPA: 3.74 (Up to 6th semester)

ACHIEVEMENTS & AWARDS

- Vice Chancellor's Honor Award for Academic Excellence
- Dean's Honor Award for Academic Excellence (2 times)
- Former member of Math Club; received certificate for serving as Seeker in organizing a club program

CERTIFICATIONS / TRAINING

Currently pursuing self-learning in:

- Python Programming
- Django Web Development
- SQL & Database Design
- Git & GitHub
- Artificial Intelligence Fundamentals

LANGUAGE PROFICIENCY

- Bengali — Excellent (Reading, Writing, Speaking)
- English — Good (Reading, Writing, Speaking)

EXTRA-CURRICULAR ACTIVITIES

- Participated in Techathon 2026 (hackathon) with Team The Tech Titans
- Prepared technical project documentation and presentations
- Interested in Artificial Intelligence, Robotics, and emerging technologies

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL, HTML, CSS, JavaScript (Basic)
- **Frameworks/Tools:** Django, REST API (Basic), Git, GitHub, Pandas, scikit-learn, Matplotlib, Seaborn
- **Databases:** PostgreSQL, SQLite, MySQL
- **Dev Tools:** VS Code, PyCharm, OBS Studio, Canva
- **Core Concepts:** OOP, Data Structures & Algorithms, DBMS, Software Engineering, SDLC, Agile Methodology, API Integration

ACADEMIC PROJECTS

BookNest — Library Management System

Python, Django, SQLite

- Built a full-featured, role-based library platform (Admin, Librarian, Regular User) covering book cataloging, borrowing/returns with automatic fine calculation, and member management.
- Implemented research paper and digital resource modules with an upload-review-approval workflow for librarians.
- Added premium content (paid notes/courses) with purchase tracking and a mobile-payment module (bKash, Nagad, Rocket).
- Developed supporting features: book reviews/ratings, wishlist, notifications, support tickets, system activity logs, CSV/PDF report exports, and an analytics dashboard.

Hospital Management System

MySQL

- Built a database-driven system to manage patient records, appointments, and hospital administration data.

University Canteen Management System

Python, Django

- Developed a web application to manage canteen orders, menu items, and billing for university students and staff.

HACKATHON PROJECT

Office Monitor — Real-Time Electricity Monitoring System

Techathon 2026 (Preliminary Round) • Team The Tech Titans • Python, Django REST API, SQLite, Discord Bot, Groq LLM, HTML

- Built a real-time office electricity monitoring system with a live web dashboard (room-wise device status, per-room power and kWh, timestamped alerts) and an AI-powered Discord bot, both reading from one shared Django REST backend.
- Simulated 15 devices across 3 rooms stored in SQLite; the bot supports status/room/usage commands, free chat via Llama 3.3 70B (Groq), and proactive alert posts.
- Developed as a 2-member team; included a Wokwi circuit simulation. GitHub: [ayesha-rahman37/Techathon2026--The-Tech-Titans-](https://github.com/ayesha-rahman37/Techathon2026--The-Tech-Titans-)

MACHINE LEARNING & DATA ANALYSIS PROJECTS

Oasis Infobyte Data Science Task Series (SIP) • 2026

Self-directed projects based on a standard data science task list • Python, scikit-learn, Pandas, Matplotlib, Seaborn

- **Iris Flower Classification** — Compared Logistic Regression, KNN, and Decision Tree classifiers (scikit-learn); used 5-fold cross-validation to select the best model (97.3% accuracy).
- **Sales Prediction** — Built and compared regression models (Linear Regression, Random Forest) to predict sales from advertising spend; Random Forest achieved $R^2 = 0.98$.
- **Unemployment Analysis (India)** — Performed exploratory data analysis on COVID-19's impact on unemployment trends across Indian states using Pandas, Matplotlib, and Seaborn.
- GitHub: github.com/shah-iqra/OIBSIP

SOFT SKILLS

Problem Solving • Critical Thinking • Communication • Teamwork • Leadership • Adaptability • Time Management • Fast Learning Ability • Analytical Thinking
